

CELFINET TO ATTEND THIS YEAR'S EDITION OF FUTURECOM

LISBON, OCTOBER 2018

PARTNERING WITH COMBA, ENGINEERING COMPANY CELFINET WILL BE PRESENTING ITS RAN MANAGEMENT SOLUTIONS AT FUTURECOM FROM OCTOBER 15TH TO 18TH.

With 20 years of existence, Futurecom represents one of the biggest and most important events in the field of Telecommunications and Technology in South America. The event takes place from October 15th to 18th at São Paulo Expo building, bringing together the latest digital solutions of the industry.

Ranging from Smart Cities to Health Care solutions, the event will gather more than 70 projects from across the globe.

In partnership with COMBA telecom, CELFINET is one of the participants of this year's edition, exhibiting at the STAND G16, an interesting range of management solutions for Mobile Networks.

The global engineering company will present VISMOM - a mobile networks management platform that allows telecom operators to increase efficiency and reduce operational costs. The management solution provides instant visibility of the network's inventory and degradation areas, and helps reduce RAN energy consumption effectively.

Nuno Ribeiro, CEO & Founder of CELFINET said: "Telecom operators are facing numerous challenges to introduce the fifth generation network. For that reason, we want to showcase the potential that both our VISMOM ENERGY and VISMOM MANAGER platforms have regarding this challenge at Futurecom. These solutions are prepared to handle different types of technologies, allowing detailed virtualization of network information, so that operators can make better management decisions without affecting the end-user experience throughout the transformation."

In addition to the wide range of exhibitors, on its 20th edition, Futurecom will provide insights on current matters such as IoT and Cybersecurity, inviting speakers from major technology companies such as Google and Sterlite.

Founded in 2003, Celfinet was born with a powerful vision: to develop innovative engineering solutions that could "turn RAN management complexity into simplicity". Based in Portugal, and with a team of more than 250 engineers spread across 4 continents, Celfinet has become a major technological reference for some of the largest mobile telecommunication operators in the world.
